HOW TO INSTALL PRESETS
in Adobe Lightroom

Things you'll need-

– Windows or Macintosh computer.

– Adobe Lightroom (Installed in your computer)

– Your ***downloaded*** preset file.
*(It will likely be compressed and you'll need to unzip it
and put the file somewhere easy to find.)*

Now, let's start-

– Open Lightroom.

– On a ***PC***, go into Lightroom & click on ***Edit*** at the top (next to File), then click on ***Preferences.***

   And, On a ***Mac***, click on the ***Lightroom tab*** (to the left of File), then click on ***Preferences.***

– From the new screen that pulls up, click on ***Presets*** (the second tab).

– ***Click*** on the box titled, Show Lightroom Presets Folder.

– Double click on ***"Lightroom"*** folder.

– Double click on ***Develop Presets*** folder.

– ***Copy*** the folder(s) containing your presets into the ***Develop Presets*** folder

– *(If Lightroom was open when you copied the presets, you will have to close it and restart it.)*

   That's ***awesome.*** You're done!

I hope this helps! Let me know if you have other questions.
